

Struggling with hay fever symptoms despite taking medication?

Book your Kenalog injection today to stop hay fever from controlling your summer.

[Book an appointment today](#)

Between 10-15% of us suffer from hay fever symptoms. For many people, it causes significant fatigue and problems with concentration and alertness.

We have now started our Kenalog Injection clinics for our patients who do not respond to conventional, easily available treatments like antihistamine tablets, nasal sprays and eye drops. Book your Kenalog injection at The Whitehall Clinic to help get through the season.

A Kenalog injection helps many people with their symptoms of severe hay fever. For many people it completely relieves the symptoms for the entire season and for others it reduces the severity of the symptoms to a point where adding other treatments can get life back to normal.

Price: £95
